*GRAPE HYACINTHS*

Grows 6 inches high. 50c per doz., \$3.50 per 100.

**LILIUM candidum** (Madonna Lily)

Differing from other Lilies, it is best planted in September. Since it is a base-rooting Lily, it need not be planted as deep as the stem-rooting kinds. The bulbs should be covered with 2 to 3 inches of soil. When planting, place a few handfuls of sand underneath each bulb. The bulbs will make 6 or 8 inches of top growth in the fall. After the ground is frozen, cover the tops with salt hay. Jumbo bulbs, 75c each, \$8.00 per doz. Regular size, 40c each, \$4.50 per doz.

## HARDY GARDEN LILIES

**LILIUM auratum** (The Gold-Banded Lily). In congenial surroundings it blooms abundantly on 4 to 5-foot stems in August and early September. Set the bulbs 9 to 10 inches deep. Very fragrant. Jumbo bulbs, \$1.00 each, \$10.00 per doz.

**LILIUM regale** (Regal Lily). White with the outside of the blooms shaded purple. Plant in October and November. Blooms in July. Grows 4 feet high. Plant bulbs 6 inches deep. Jumbo bulbs, 40c each, \$4.50 per doz.

**LILIUM speciosum magnificum**. Pink blooms spotted with crimson, resembling an orchid. Grows 5 feet tall; blooms in August and September. Since Speciosum is a stem-rooting Lily, it should be planted 8 to 9 inches deep, with a few handfuls of sand underneath each bulb. For striking effects plant in groups of three to five with masses of white phlox. 65c each, \$6.95 per doz.

**SPECIAL NOTE** on *L. auratum* and *L. speciosum*: Since *Lilium auratum* and *L. speciosum* do not arrive until late November or early December, we suggest that you dig the holes for these Lilies in advance, before the soil freezes. Fill the holes with salt hay. When the Lilies are delivered, you will not be confronted with the planting problem should the ground be frozen.

## DUTCH IRIS

Lovely both in the garden and as a cut flower, these delicate-looking Iris belie their looks, for they can endure winter weather and need little care. For something different and altogether beautiful try some Dutch Iris. Plant 4 to 5 inches deep. They may be grown indoors as well as outdoors.

**Golden Harvest**. Golden yellow; fragrant. \$1.25 per doz., \$8.00 per 100.

**Imperator**. Dark purple-lilac. \$1.25 per doz., \$8.00 per 100.

**White Excelsior**. Pure white; fragrant. \$1.25 per doz., \$8.00 per 100.

## WEDGWOOD IRIS

Mostly grown indoors although they are hardy and can be planted outdoors. The two-tone blue color gives it a rich appearance. May be had in bloom under glass in February. They prefer to be forced slowly in a temperature not over 60° F. Grows 2 feet tall. \$1.80 per doz., \$12.00 per 100.

## HYACINTHS

**Sunilawn.** Although Sunilawn has a rougher texture than the higher-priced mixtures, we consider it very practical. It grows well under rough soil conditions and contains white clover, which we highly recommend. Lb. 95c, 5 lbs. \$4.50, 25 lbs. \$21.25, 100 lbs. \$80.00.

### Grass Mixtures for Shady Places

#### FIGHT CRAB GRASS

Use Arsenate of Lead every year, preferably in early Spring and Fall at the rate of 20 lbs. per 1000 sq. ft., to help keep your lawn free of crab grass.

### Plant White Clover with Grass Seed

For sunny locations we recommend using 5 to 10% White Clover in a grass seed mixture. It stays green in dry weather and it helps to crowd out crab grass. For best results use the new Wild White Clover, which is more compact and much more durable than the Common White Clover.

**Wild White Clover.** Lb. \$2.50.

**Common White Clover.** Lb. \$1.65.

### Seaside Mixture

A special mixture of hardy grasses for use in the vicinity of salt water. Contains Seaside Bent, Kentucky Blue, Chewing's Fescue, Creeping Red Fescue, and Fancy Red Top. Use 1 lb. per 100 sq. ft. Lb. \$1.25, 5 lbs. \$6.00, 25 lbs. \$28.75, 100 lbs. \$110.00.

**Gro-Sod.** A specific formula for a specific purpose—to feed lawns. Through careful study F. H. Woodruff & Sons have found that an analysis of 10-6-4 feeds grass properly throughout the growing season. Nitrogen, the fertilizer element

that induces luscious green leaf growth, predominates in this fertilizer. One pound of Gro-Sod is required for each 100 sq. ft. of lawn area, or 500 lbs. per acre. A fertilizer distributor will do an even, economical job. 25 lbs. \$2.70, 50 lbs. \$4.55, 100 lbs. \$7.75.

### Winter Rye "The Poor Man's Fertilizer"

Plant in the Fall . . . Turn it under in the spring

To improve the soil in the vegetable garden or in a proposed grass area, the most economical method is to plant a cover crop of Winter Rye. When turned under in the spring, it incorporates green manure into the soil, thereby improving the physical condition of the soil. Use 1 lb. per 200 sq. ft., or 2 bus. per acre. Lb. 10c, 1/2 bus. \$2.75, bus. (56 lbs.) \$5.25, 5 bus. \$25.00.

### Smith's Rodent Destroyer Kills Moles in Lawn

Gas them with mole bombs. Safe to use; will not harm grass or shrubs, and may be safely used in the open air. 10c each, \$1.00 per doz.

## Scotts Turf Builder

Supplies all the needed elements in correct proportions for feeding grass and trees. Just before sowing seed apply Scotts Turf Builder. This special grass food does not harm seed so it is not necessary to delay seeding. In constructing a new lawn, distribute 20 lbs. of Turf Builder per 1000 sq. ft. and rake it into the top 2 or 3 inches of soil. Use just half this amount, 10 lbs. per 1000 sq. ft., when feeding an established lawn. Care should be used to make application only when the grass is dry. An abundant supply of the right type of nourishment not only encourages old grass to spread out and take a new lease on life but it also insures healthier and more vigorous growth of new grass.

## FALL PROGRAM FOR CRAB-GRASS INFESTED LAWNS

1. Mow lawn as closely as possible. Rake with a bamboo or wire rake; then mow again. Repeat the operation once again.
2. Feed generously with Scotts Turfbuilder at the rate of 10 lbs. per 1000 sq. ft. (Use a Scott Spreader for best results.)
3. If broad-leaved weeds such as plantain, dandelion, etc., are bad, skip step 2 and use Scotts Weed and Feed but wait a week before sowing seed.
4. Sow Scotts Lawn Seed, 2 to 3 lbs. per 1000 sq. ft.
5. Cut lawn regularly and closely, particularly as long as weeds and crabgrass are in active growth. Catch clippings to prevent smothering of new grass.
6. If possible, keep lawn moist to hasten germination and seedling growth.

**CHINCH BUGS** under glass, magnified seven times. Chinch bugs attack grass by piercing their tiny beaks into the grass stems to suck out juices. The grass wilts, then turns brown. Chinch bugs are active in full sun only. Unless their activities are checked, they will eventually destroy large patches of turf. They are especially active in hot, dry weather from early June until frost. Use Scotts Pest Control to kill these insects.

## GRUBS OF JAPANESE BEETLE

Damaged turf appears to be suffering from lack of water, turns brown in irregular patches. The grass is severed at roots and can be peeled off. Use Scotts Pest Control to kill these grubs.

## Scotts Lawn Seed

This is a top-quality blend of grasses for open, sunny or lightly shaded lawns. Growing ability is assured by Scotts system of laboratory control that checks the seed before it is packaged. If you are building a new lawn, sow Scotts Seed at the rate of 4 to 6 lbs. per 1000 sq. ft. If you already have a lawn but want to improve it, sow 2 or 3 lbs. per 1000 sq. ft., depending on the present stand of grass.

It is coarser in texture than the steamed bone, and also contains more nitrogen than the lower-priced bonemeals. Since it will not burn, it is absolutely safe to use. ### VERMICULITE

For Storing Bulbs and Root Crops

Vermiculite acts as a perfect moisture control when used to store bulbs or root crops. It will not absorb moisture from the inside of stored tubers, but it does take up free moisture from the outside, thus preventing storage rot. Stored tubers are protected from even the most severe temperature changes.

### FOR STARTING SEEDS

Use it right out of the bag without adding soil or fertilizer. Most useful in the germinating of seeds because it is completely sterile. Damping-off of seedlings is no longer a problem if you use Vermiculite. ½ pk. 50c, pk. 85c, 2 bus. bag \$2.25.

### Greenhouse Gardening for Everyone

By ERNEST CHABOT

Here, for the first time, is a book which answers all the questions about gardening under glass. It tells what kinds of plants you can grow under glass, what bulbs to force into bloom in midwinter, and how to have a lovelier garden by growing hundreds of husky plants to set in the outdoor garden in Spring. \$4.00.
